

# Stay safe with Emollient Creams

Emollient products may contain paraffin or other ingredients, such as shea or cocoa butter, lanolin, nut oil or mineral oils, which can leave a flammable residue that absorbs into clothing and fabrics.

**Know how to reduce the fire risks caused by emollients.**

**Scan the QR code for fire safety advice.**

If you're concerned about your emollient products, please speak to a GP, family member, carer, or Royal Berkshire Fire and Rescue Service to arrange a Safe and Well Visit at [safeandwell@rbfrs.co.uk](mailto:safeandwell@rbfrs.co.uk).
